

myLearning TF2 cont.

Friday, February 18, 2022 9:52 AM

Previously in [myLearning TF2](#), tried to use my laptop and its tf2_any environment for GCP course 'Introduction to TensorFlow'

```
--Create env
conda create --name -_tf2
conda activate anya_tf2
python -m ipykernel install --name anya_tf2
```

```
--Install packages
#ensured numpy and pandas are already installed
```

```
#install tf specific version
pip install --upgrade tensorflow==2.6.3 #didn't work
pip install --upgrade tensorflow==2.6.3 --user
```

*** Change of plans

```
--2/21/2022 Redo on my laptop (due to no access to network)
Adding anya_tf2 env with TF 2.6.3 version for coursework
numpy 1.21.4, pandas 1.0.3
```

```
#install tf specific version
pip install --upgrade tensorflow==2.6.3 #didn't work
pip install --upgrade tensorflow==2.6.3 --user
#ensured numpy, pandas, tensorflow versions after installation
numpy 1.19.5, pandas 1.0.3
tensorflow 2.6.3
```

Ready for the lab
